

## PARTNER FACT SHEET

# One Tab. One Check. Play, F&B, & Retail—Unified.

**GAME PLAY CHARGES FLOW DIRECTLY ONTO A GUEST'S TAB—SO F&B, ATTRACTIONS, AND RETAIL ALL SETTLE ON ONE CHECK.**

The GoTab + Amusement Connect integration turns RFID cards into the playing currency for arcade machines, redemption games, and similar attractions. A server provides a card to the guest's open tab; the guest taps to play, and every play posts as a line item alongside their food and drinks. No separate kiosk, no second payment surface — just one check at the end of the visit.

### KEY FEATURES

#### Unified Tab Billing

Gameplay, F&B, and retail all land on the same GoTab tab. Guests pay once at the end of their visit—no separate game cards, kiosks, or payment flows.

#### Frictionless Guest Flow

Servers link an RFID card to a guest's tab at the POS. Guests simply tap at any connected machine and start playing instantly.

#### Automatic Play Posting

Each play is automatically added to the GoTab tab with the game name, quantity, and price—no SKU mapping or product UUID setup required on the GoTab side.

### BENEFITS

#### Single-Check Settlement

Attractions revenue reconciles alongside F&B and retail in one GoTab Report—no merging data across separate systems at end of day.

#### No Extra Payment Surface

Guests never need a separate kiosk or top-up station, reducing friction and simplifying the guest experience.

#### Guest Identity on Every Play

Because play is tied to a named tab, operators get visibility into who's spending what — not just anonymous card swipes.
